Cálculos

PARA LA FUENTE N° 1

$$20 - I1 - 2.2(I1 - I2) = 0$$

$$20 - I1 - 2.2(I1) + 2.2(I2) = 0$$

Ecuacion 1
$$-3.2(I1) + 2.2(I2) = -20$$

$$-1.29(I2) - 2.2(I2 - I1) = 0$$

Ecuacion 2
$$2.2(I2) - 3.49(I2) = 0$$

$$I1 = 11.03 \ mA$$

$$I2 = 6.95 \, mA$$

Por ley de Ohm

Tension en
$$R(0.82 \text{ kohm}) = I2 * R$$

$$Va = 5.699 V$$

PARA LA FUENTE N° 2

$$12 - 0.47(I1 - I2) = 0$$

Ecuacion 1
$$-0.47(I1) + 0.47(I2) = -12$$

$$-0.82(I2) - 0.47(I2 - I1) - 0.68(I2) = 0$$

Ecuacion 2
$$0.47(I1) - 1.97(I2) = 0$$

$$I1 = 33.53 \ mA$$

$$I2 = 8 mA$$

Por ley de Ohm

Tension en R(0.82 kohm) = I2 * R = 8 * 0.82

Va = 6.56 V

Errores

Corriente Total

$$e = \frac{valor\ teorico - valor\ medido}{valor\ teorico} \ x\ 100$$

$$e = \frac{26.55 - 24.4}{26.55} \ x\ 100$$

$$e = 8.09\%$$

Voltaje Total

$$e = \frac{valor\ teorico - valor\ medido}{valor\ teorico} \ x\ 100$$

$$e = \frac{861 - 952}{861} \ x\ 100$$

$$e = 10,56\%$$

Ix cuando V1=0

$$e = \frac{valor\ teorico - valor\ medido}{valor\ teorico} \ x\ 100$$

$$e = \frac{33.53 - 33.50}{33.53} \ x\ 100$$

$$e = 0.08\%$$

Va cuando V2=0

$$e = \frac{valor\ teorico - valor\ medido}{valor\ teorico} \ x\ 100$$

$$e = \frac{5.70 - 5.699}{5.70} \ x\ 100$$

$$e = 0.01\%$$
